
python-imbox Documentation

Release 1

MAIN MAN HERE

2015-07-10

1	imbox	3
2	Indices and tables	5
	Python Module Index	7

Warning: from imbox import Imbox

Contents:

imbox

```
class imbox.Imbox (hostname, username=None, password=None, ssl=True)
```

```
    Bases: object
```

The Imbox is a container for a connection to a mailbox or a server.

```
    fetch_by_uid (uid)
```

Fetches a message using some magic called BODY.Peek

return: an email object

```
    fetch_list (data)
```

```
    messages (*args, **kwargs)
```

```
class imbox.imap.ImapTransport (hostname, port=None, ssl=False)
```

```
    Bases: object
```

```
    connect (username, password)
```

Connect to the IMAP server

```
    list_folders ()
```

returns a py:'list' of strings

```
class imbox.parser.Struct (**entries)
```

```
    Bases: object
```

```
    keys ()
```

```
imbox.parser.decode_mail_header (value, default_charset='us-ascii')
```

Decode a header value into a unicode string.

```
imbox.parser.get_mail_addresses (message, header_name)
```

Retrieve all email addresses from one message header.

```
imbox.parser.parse_attachment (message_part)
```

```
imbox.parser.parse_email (raw_email)
```

Indices and tables

- `genindex`
- `modindex`
- `search`

i

`inbox`, 3
`inbox.imap`, 3
`inbox.parser`, 3

C

`connect()` (`imbox.imap.ImapTransport` method), 3

D

`decode_mail_header()` (in module `imbox.parser`), 3

F

`fetch_by_uid()` (`imbox.Imbox` method), 3

`fetch_list()` (`imbox.Imbox` method), 3

G

`get_mail_addresses()` (in module `imbox.parser`), 3

I

`ImapTransport` (class in `imbox.imap`), 3

`Imbox` (class in `imbox`), 3

`imbox` (module), 3

`imbox.imap` (module), 3

`imbox.parser` (module), 3

K

`keys()` (`imbox.parser.Struct` method), 3

L

`list_folders()` (`imbox.imap.ImapTransport` method), 3

M

`messages()` (`imbox.Imbox` method), 3

P

`parse_attachment()` (in module `imbox.parser`), 3

`parse_email()` (in module `imbox.parser`), 3

S

`Struct` (class in `imbox.parser`), 3
